

Dynelevel customer web sites.

Our latest dyne pen supplier is based in Germany. Their name is dynelevel and their point of difference is that their pens are formulated with non toxic components.

Being so new to us we have asked them for a reference list of international customers so that you may be assured of their product acceptance in this area of "green" testing.

Please feel free to visit these sites to see what products they are manufactured and using these pens on. I'm sure you will know many of them and their products.

REFERENCE USER SITES.

Klöckner Pentaplast Europe GmbH

Toxic free pen technology at this time tends to be less exact in comparing with our Accudyne technology. Development is based around **ISO 8296 / ASTM 2587 standards**. Environment friendly use is their key for fast and simple testing.

Please see our information and data sheets on our web site for further information.

Samples are available.
